Functional Requirements Form

The purpose of this information is to help you decide if you will require any work place adjustments to help you achieve the full remit of the job role should you be successful.

The first column will be completed by the recruiting manager. He/ she will check the rows that apply to this job role. You only need to look at the rows that are checked. The second column gives some examples of health conditions that may affect your ability to undertake the requirements identified by the recruiting manager. There may be other conditions not listed that may affect the job role. The right hand column gives examples of the range of support or adjustments available for those with health conditions or what the Trust can do to protect your health and wellbeing particularly if you have a health condition or disability. Reasonable adjustments are available for those with disabilities in compliance with the Equality Act 2010. If you are unsure about any of the information below, you may contact the occupational health department on 020 3313 3063 and ask to speak to one of the occupational health nurse advisers. You may also contact your recruiting manager if you are unsure about any aspect of this job/role or workplace. If you have any health condition or disability requiring support an occupational health nurse will contact you to find out how your health may affect this job and how we would be able to support you.

| Exposure prone procedures (EPP) such as work in delivery suites, operating theatres or trauma within A & E All surgeons, medical staff in A&E, Urology, Obs and Gynae, require clearance to practice exposure prone procedures (EPP). Midwives, theatre nurses, ODPs, dental nurses and A&E nurses require clearance to practice exposure prone procedures (EPP). This does not apply to HCAs and AHPs. | The UK Department of Health states that healthcare workers performing EPP must not be infected with HIV or be infectious for hepatitis B or hepatitis C infection. | At this time HIV infection is not compatible with EPP work. However in many cases, someone with HIV infection may be able to work with specific restrictions on their practice. EPP workers infected with hepatitis B or C may require additional tests of infectivity before a decision about EPP clearance can be given. Again, some restrictions on practice may be sufficient to allow the infected healthcare worker to work. |
| Ability to undertake general physically demanding work including regularly moving/handling patients, lifting or moving loads > 5kg, frequent walking (or running in an emergency) or prolonged standing This job may require regular pushing, pulling, lifting and carrying of heavy loads such as patients, trolleys, equipment and materials or wearing lead apron, travelling across the hospital | Musculoskeletal problems (back, neck, arms, shoulders, joints etc). Conditions that cause fatigue. If you have a problem that causes back pain particularly or have problems with your joints especially knees or feet you should let us know. | Most musculoskeletal problems are minor and resolve with treatment. Some chronic problems may require adjustments if mobility, strength, grip or flexibility is impaired. Patient moving and handling equipment should be available in all clinical areas. Adjustments to the workplace, equipment and work practices are possible. Support is available from the staff physiotherapist, the moving and handling advisors and the health and safety team. |
| Resilience to workplace pressures including working to deadlines or in stressful environments. Working in the health service can be busy and pressurised at times and work in patient areas can be distressing due to patients with serious illness or death. Starting a new job can add additional pressures. | Mental health problems including anxiety or panic disorders, depression, bipolar affective disorders, schizophrenia. Some medications used to treat these conditions may causes side effects such as sedation, tiredness or reduced concentration. Other conditions that may be affected by stress include epilepsy, bowel conditions and some cardiac conditions. | Support is available from CONTACT, the staff counselling and stress management service, occupational health and your manager. Please declare if you have significant current/ ongoing mental health problems (including work related stress). You will be contacted by an occupational health adviser for a confidential discussion. The Trust has a robust stress management policy and process that can help minimise the effect of workplace stress. |
